**PLATFORM LIFT
FOR VILLA**

Keep You and Your Family Safe

FUJIATLAS Platform Elevator has always adhered to the principle of safety and reliability. Elevator design should consider safety protection measures against any possible situations. FUJIATLAS Elevator has intelligent double-door and safety sensors to prevent pinch to hands of children nearby the elevator. With standard child lock, the elevator can be configured to prevent children from using the elevator when adults are not at home.

Child Lock

Child lock may prevent children from accidentally touching the button, watching over the next generation.

Pinch Protection

A circle of pinch protection touch plate in the peripheral of the platform may activate the safe switch and stop the elevator if treaded or if there is external matter stuck in the operation gap. The elevator will resume operation when cleared of tread or external matter!

Multiple Options of Door-opening For Quality Life

FUJIATLAS Platform Elevator offers multiple door-opening options to users, with customizable designs tailored to special needs.

Hoistway Frame

For installation of domestic elevators indoors, aluminum alloy frames are often the preferred solution to build hoistways quickly.

With modular prefabrication and building block installation, the aluminum alloy frame can save the installation time.
